The Neighbourhood Centre, Allesley Park

Coventry City Council is working with CareCapital Limited, Allesley Park Medical Centre and Coventry Primary Care Trust to develop a brand new Community Library and Medical Centre at Allesley Park

"Coventry City Council is pleased to be able to work with partners to deliver such an exciting joint venture with the private sector. Not only will the development bring a much needed library for this area of the city, but it will also provide a centre where the community can meet and become a focus for the area"

Councillor Abdul Khan, Cabinet Member, Culture, Leisure, Sport and Libraries

Education and fun for everyone

The library will be an open-plan development with space for adults and children, offering free books, newspapers and magazines, Internet and email access as well as study facilities, sitting areas, activity areas, a secure garden and a public meeting room.

High quality healthcare accessible by all

Replacing the existing medical centre, the new purpose built surgery will provide over 840m² for 6 GPs and 770m² additional space available to lease for other services. A new pharmacy will be included. The new buildings will be located adjacent to the existing Allesley Park Medical Centre and will have substantial parking for patients, staff and visitors.

Building the best for Allesley Park

Work has started on site and is divided into 2 stages. The first stage will include construction of the library and the majority of the medical centre and will take approximately 10 months to complete. The second stage will see the existing medical centre demolished and the remaining medical centre and pharmacy construction undertaken along with disabled parking spaces and a new entrance. Construction will conform to BREEAM Very Good standard with high environmental credentials to provide sustainable and healthy buildings for all who use them.

This development will enhance the medical provision in the area and provide the people of Allesley with a proper library for all their needs
